Many meters of conviviality

**81%** of city dwellers would visit city centre more often if there were more places of conviviality and meeting places in the public realm.

Study : Les Français et l'aménagement de l'espace urbain - Kantar Public | L'Ameublement Français (oct 2017).

## Urban furniture for friendly towns

For over 40 years, Sineu Graff has been supporting town planners and designers and paying close attention to changes in the use of urban spaces. While towns today are perfectly functional, and their safety, mobility and cleanliness needs are being met, inhabitants feel they lack meeting places and centres of conviviality in the public space.

People tend to fill that gap by turning to commercial areas. Shopping centres, cafés, restaurants and cinemas have become places where town-dwellers choose to meet each other. In order to foster conviviality in public spaces, Sineu Graff has imagined a large Street Table around which people can sit, share a meal or just take a break. Our ambition is to offer solutions that will foster new uses, help the population develop innovative forms of collective city life and promote greater social cohesion. Creating friendlier towns.

In order to support current behaviours and lifestyles, Sineu Graff has created a whole range of furniture that springs from the Street Table, called Link: picnic decks, standing table, seats sets and low tables, etc. These pieces are at home in parks and in squares, each with its own function and use.

**Reinvent your town with Link !**

Vincent SCHALLER - President

# Sineu Graff

# Many meters of conviviality

To develop conviviality in the public realm, Sineu Graff naturally turned its attention to the table, which is spontaneously associated with meeting and sharing.

**The Street Table** has been designed to breathe life into towns and make room for exchange. It breaks with the codes of urban furniture and appeals to inhabitants in an immobile architectural environment.

**The Street Table** is designed for living spaces, meeting areas (with reduced traffic speed) and new eco-districts, to make these areas more desirable, and to make up for their density.

**The furniture is universal and easy to be understood as regards to its use.** People come to it immediately for their lunch break, or to sit for a while, alone or with friends and family.

# The **Street Table | Link**

**The Street Table can be extended infinitely** with its modular system: the initial module is 2 metres long, and any number of 2-metres extensions can be added to it. The seats are placed freely around the table.

## **An eco-designed range !**

Optimised transport and packaging :  
the seats slide inside the table.

Furniture shown is in **ash**  
with clear autoclave treatment

All Link furniture are available in **ash** with clear autoclave treatment or in **exotic hardwood** without stain.

The legs are in galvanised steel, not colored or **in zinc and powder coated steel** (Colours can be selected from the RAL shades or other textured shades from the Akzo Nobel Futura range).

# Community life

The Street Table has been designed to meet all requirements for community life: **its seats are independent and therefore more accessible**. There is no need to climb over a bench. The seats can be placed freely along the table, with the possibility to leave a clear area to accommodate a wheelchair or pushchair. Everybody can sit around a table with generous proportions. Nothing is unmovable, and combinations can be invented to give each member a place.

Sineu Graff has developed the Street Table in collaboration with Philippe Riehling, sustainable design specialist. The idea is **to revisit and update the picnic table**, making it clean, elegant and convivial for effective integration into all types of environment. While the materials (ash and galvanised steel) pay homage to the classic picnic tables of the country and green spaces, the long lines of the Street Table allow visual continuity that becomes stronger as the number of furniture items increases. In accordance with **an eco-design approach**, the consumption of material is reduced through simple shapes, and transport is optimised by nesting the seats inside the table.

# The **components** of the **Street Table | Link**

The Link range is made of identical dimensions wooden slats on a galvanised steel structure.  
The Street table can be extended without length limit, thanks to the 2-metres long extensions.

# Supporting new **behaviours**

**The Street Table has inspired a complete furniture range LINK.**

In collaboration with Philippe Riehling, we have developed furniture that can support urban uses and tone with a number of environments.

Propose new postures with the lounge and its shelf, the picnic deck or the table and seat sets, improve the comfort of your Street Table by adding a sunshade and complete your layout with the Link litter bin and bicycle guard.

With Link, you have the opportunity to create convivial spaces in the heart of our cities.

# Sineu Graff, urban furniture for modern lifestyles

Designed in collaboration with urban planning and living together professionals, this furniture is a concrete response to changes in the use of public space.

**Manufactured in France** by Sineu Graff teams, **we integrate all the skills and know-how** to ensure the quality and durability of our products.

**Sineu Graff offers a wide range of solutions,** from **classic furniture** to **modular furniture** and **collections in the functionalities of :**

- Rest and leisure,
- Waste management,
- Protection and safety,
- Tree protection,
- Urban planting,
- Healthy leaving.

And **services :**

- Through the **know-how of our Design and Innovation Research Department**, at the service of specific strategic projects
- By the **installation and implementation** of the furniture,
- By the **after-sales service**
