STREET FURNITURE

BOBINE ROLLING OUT USES

Coline CHABIRON,
Landscape architect,
at the origin of
«BOBINE» concept.

The «BOBINE» concept originated in the desire to combine collective imagination, versatility, simplicity and sobriety of materials.

INVENTED AND PRODUCED IN FRANCE

ECO-DESIGN FURNITURE

Bobine's deliberately simple design encourages the use of optimised resources and production methods.

The unique continuous steel structure ensures that the furniture is strong and stable. The steel is zinc and powder coated, painted with our Powder Blast process, or galvanised. It offers **a wide range of styles and durable colours** so that the furniture remains beautiful and attractive over the years.

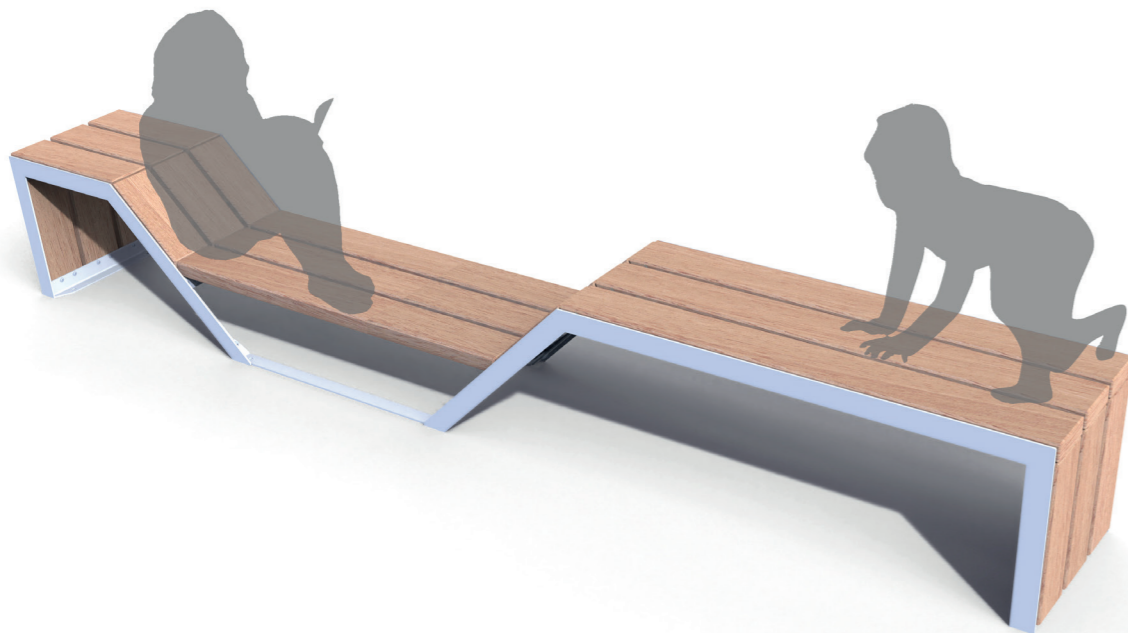

We chose larch wood to use for the panels.

Larch is a dense Class-3 wood that can be used outdoors without treatment.

The larch used by Sineu Graff is sourced locally and is PEFC certified.

The creative concept of "Bobine" adapts easily to urban life, simple in form and versatile in use.

This choice of durable materials combined with sober manufacturing is perfectly in line with our approach to **sustainable development.**

INDIVIDUAL AND COLLECTIVE

The creative concept of "Bobine" adapts easily to urban life, **simple in form and versatile in use.**

The simple shapes stimulate the imagination beyond the notion of outdoor furniture. The asymmetrical, variable-length seats unite **the individual with the collective.**

The furniture is designed to allow for multiple postures, aims **to limit the overload of public spaces** while providing **a variety of uses.**

This furniture can be used in any urban context.

BOBINE

Integrating “Bobine” **rejuvenates neighbourhoods**, at the foot of buildings, on pedestrian streets or pavements.

In parks or public squares, the modules can be used to create wide or long platforms. The fine and generous design is intended to **create rhythm, to accompany the linearity of the city without hindrance.**

It brings life and feeling to open spaces.

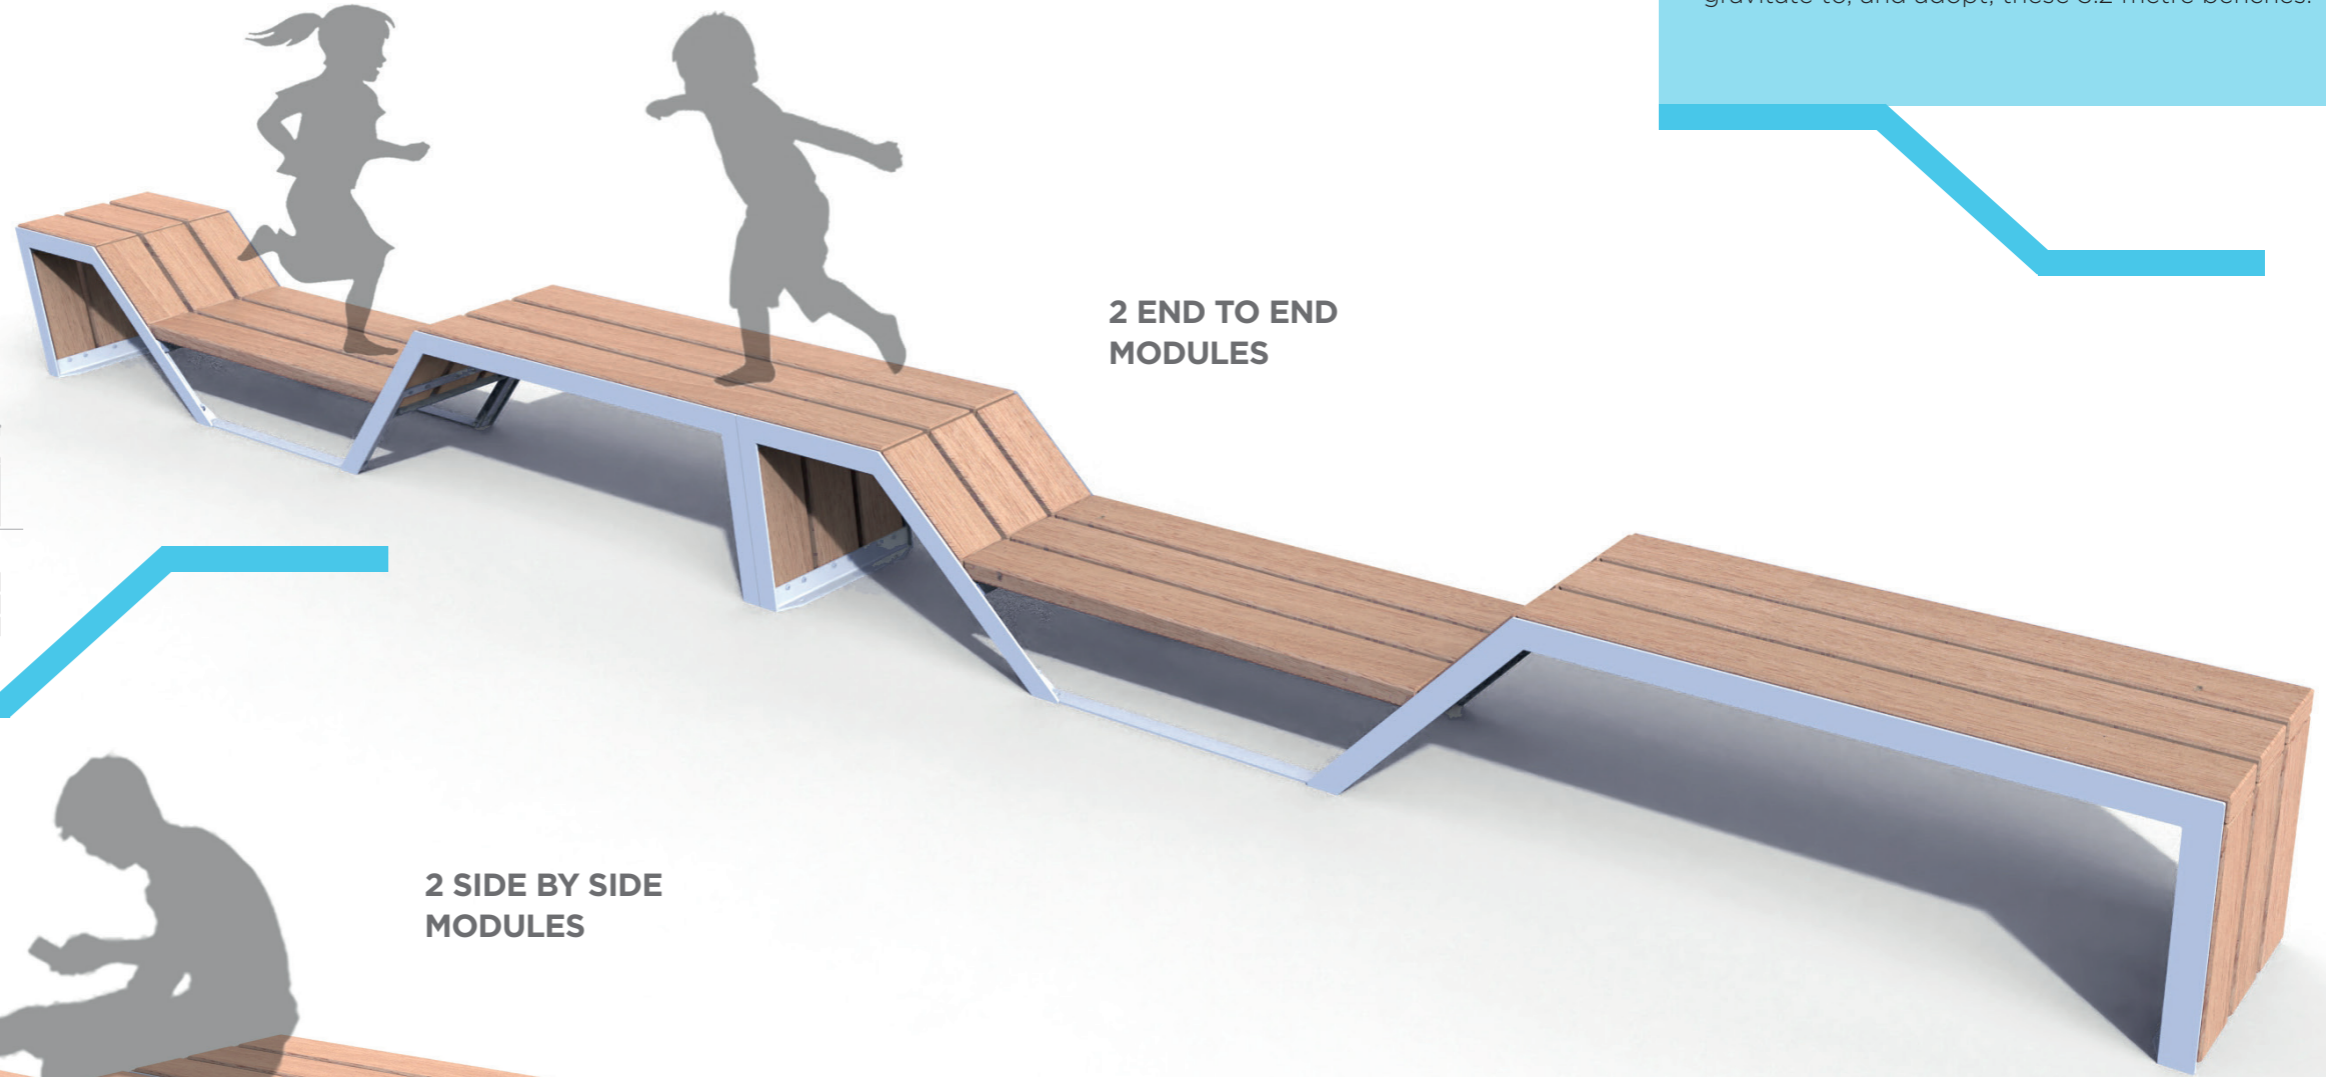

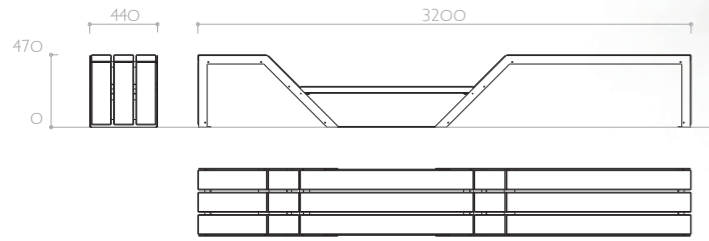

FURNITURE THAT UNFOLDS POSTURES

BOBINE frees people in the way they adopt a resting posture, somewhere between a classic sitting position and sunbathing. It offers areas to express entertaining themes

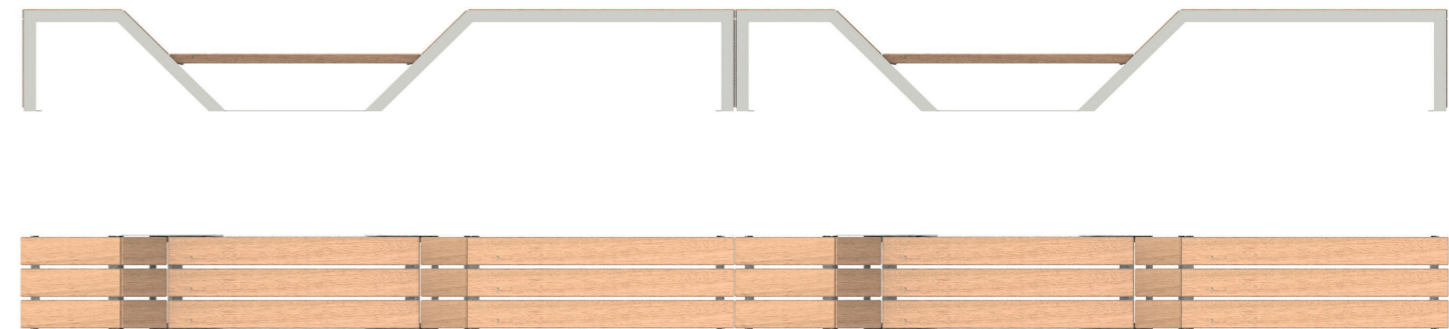

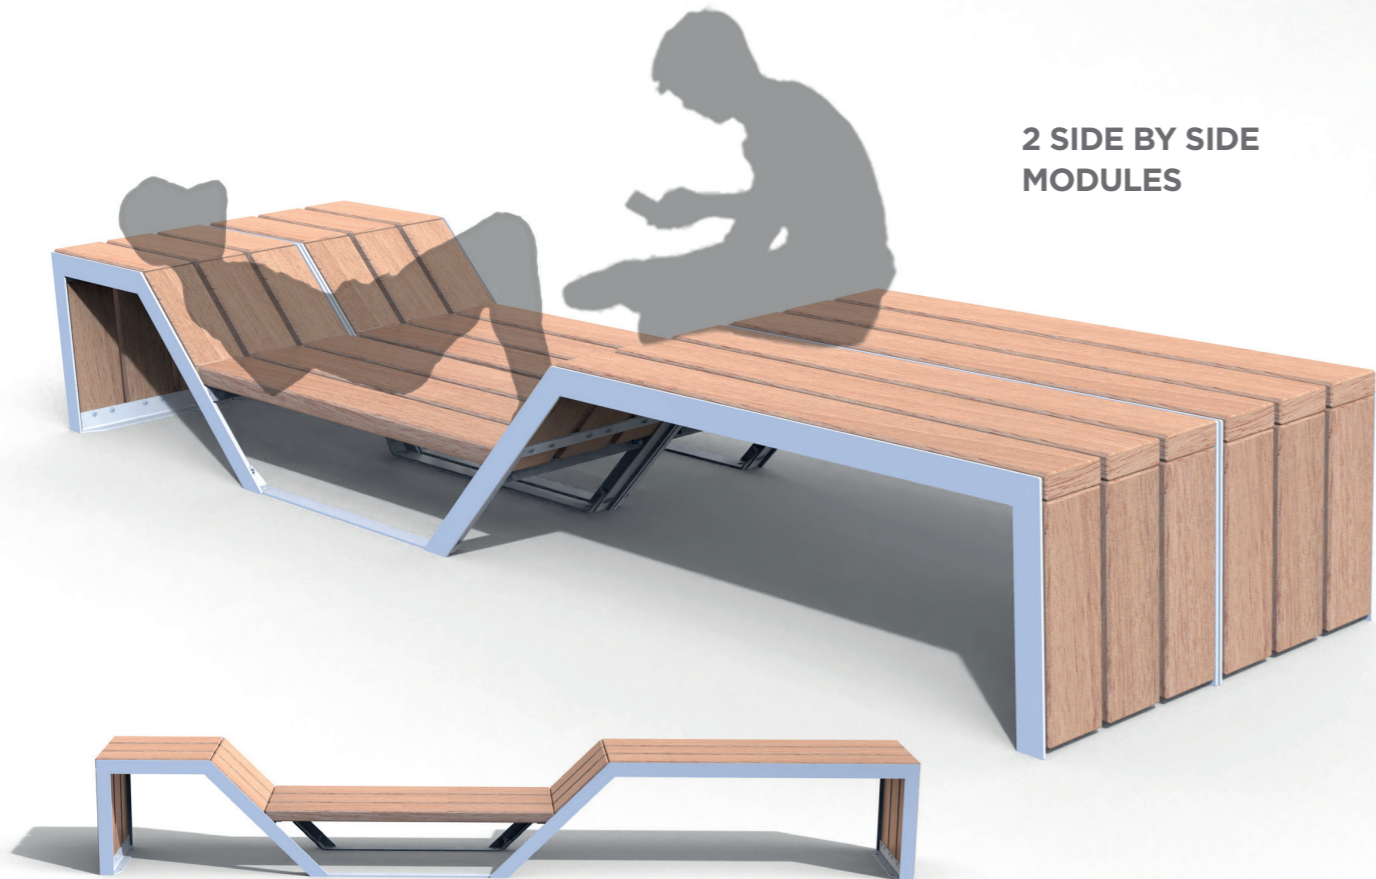

Installed end to end, face to face or side by side, “Bobine” can be used in all possible settings

Other uses can be developed freely, inventing new modes of expression in public spaces!

The sense of living together develops naturally as users gravitate to, and adopt, these 3.2 metre benches.
